NEWSLETTERS

Zhao, J. and Zuo, G. 2013 “A Critique of Welfarism and Extra-welfarism,” *Health Economy News*, January 25.

GRANTS AND AWARDS

The Andrew and Florence White Fellowship, UC Humanities Research Institute (\$20,000) 2016–2017
Summer Research Award, IMBS, UC Irvine (\$2,750) 2016
Teaching Assistant Award, UC Irvine (\$48,900 annual) 2015–2018
EDEEM Fellowship, European Union (€27,040 annual, declined) 2015–2018
Canadian Economics Association Travel Grant 2013, 2015
International Institute of Forecasters Travel Grant (\$2,000) 2013
Canadian Institutes of Health Research Travel Award (\$1,500) 2012
Yates Scholarship, McMaster University 2012
Graduate Student Association Travel Award, McMaster University 2012
Graduate and Research Scholarships, McMaster University (\$28,000 annual) 2010–2015
Presidential Scholars Fund, Harvard University (\$35,403) 2008–2009

RESEARCH EXPERIENCE

2016, **Graduate Student Researcher**, Paul Merage School of Business, UC Irvine, June – Present.

“Competition In The Drug Markets”. Developing a theoretical model of leveraging monopolistic power over competitive markets, and conducting patients’ welfare analysis.

2011, **Short Term Consultant**, Health, Nutrition, and Population Unit, World Bank, September – December.

“The Assessment of Total and Public Health Expenditures Data Discrepancy for World Bank Member Countries”. Assessed data quality and consistency, systematically documented discrepancies between data sources from WHO-National Health Account, IMF-World Economic Outlook, OECD Health Account.

2011, **Research Intern**, Dept of Health Systems Financing, World Health Organization, June – September.

“Macroeconomic Forecasting of Health Expenditure and its Components for WHO Member Countries”. Evaluated forecasting methods for health spending using National Health Account database.

2010, **Research Fellow**, Dana-Farber Cancer Institute, Harvard Medical School, January – June.

“Medicaid Services and Outcomes Research”. Examined the cancer stage distribution, delivery and survival outcomes of standard chemotherapy and radiation associated with Medicaid enrollment in New York and California.

2009, **Research Fellow**, National Institute of Injury Prevention, Ministry of Health, Mexico, July – December.

“The Impacts of Influenza A/H1N1 on Health Care Expenditure in Mexico”. Conducted panel data analysis, drafted and disseminated research report.

TEACHING INTERESTS

Mathematics for Economics, Health Economics (graduate)
Economics, Mathematics (undergraduate)

TEACHING EXPERIENCE 2015 – present, **Teaching Assistant**, Economics Department, UC Irvine
 Taught discussion sessions two hours each week; reviewed course contents; wrote extra credit problems; discussed and graded assignments, midterms and finals; held office hours at Economics Learning Center; answered students' questions about course materials; mentored students on their choices of major and career.
 Econ 20A: Basic Economics I/Microeconomics (2 quarters, 100 students each quarter)
 Econ 100C: Intermediate Economics III/Macroeconomics (1 quarter, 85 students)
 Econ 122A: Applied Econometrics I (1 quarter, 40 students)

INTERNATIONAL CONFERENCE PRESENTATIONS 2015, “*Anonymous Social Orderings*”
 the Royal Economic Society annual conference, Manchester, United Kingdom, March 30.
 the 49th Annual Conference, Canadian Economics Association, Toronto, Canada, May 30.

2013, “*Forecasting Health Expenditure*”
 the 33rd International Symposium on Forecasting, Seoul, South Korea, June 24.
 the 47th Annual Conference, Canadian Economics Association, Montreal, Canada, June 1.
 the 12th Annual Meeting, Canadian Health Economist’s Study Group, Winnipeg, Canada, May 22.

2012, “*Forecasting Health Expenditure*”
 the 9th European Conference on Health Economics, Zurich, Switzerland, July 20.
 the 2nd Global Symposium on Health Services Research, Beijing, China, November 2.
 the Annual Canadian Association for Health Services and Policy Research Conference, Montreal, Canada, May 30.

2011, “*Evaluating Forecasting Methods for Health Spending*”, Department of Health Systems Financing, World Health Organization, Geneva, Switzerland, August 30.
 “*Impacts of Influenza A/H1N1 on Health Care Expenditure in Mexico*”, the 8th World Congress on Health Economics, Toronto, Canada, July 12.

CAMPUS TALKS 2016, “*Hippocratic Paradox*”, IMBS Luce Graduate Student Conference, May 27.
 2015, “*The Possibility of Anonymous Social Orderings Using Curvature of Indifference Hypersurfaces*”, IMBS Friday Lunch Seminar, October 9.

PROFESSIONAL DEVELOPMENT Preparing for the Faculty Career Certificate Program: completed workshop series on faculty career preparation offered by the Graduate Resource Center at University of California, Irvine, Spring 2016.

Certificate of Completion of Neural Networks in System Identification and Forecasting: completed the workshop on neural networks offered by the International Institute of Forecasters, 2013.

Certificates of Completion of Medical Terminology I & II: completed workshop series on basic and advanced medical terminology offered by Dana-Farber Cancer Institute, Harvard Medical School, 2010.

SERVICE TO PROFESSION Chair: Annual Conference of the Royal Economic Society, session of collective decision-making, Manchester, United Kingdom, 2015.

Discussant:
 Annual Conference of Canadian Economics Association, Toronto, Canada, 2015.
 Annual Conference of Canadian Economics Association, Montreal, Canada, 2013.
 Annual Meeting of Canadian Health Economist’s Study Group, Winnipeg, Canada, 2013.

UNIVERSITY SERVICE Coordinator: Institute for Mathematical Behavioral Sciences Friday Seminar Series, May 2016–present.
Vice President: Chinese Students and Scholars Association, Harvard School of Public Health, 2009–2010.

MEMBERSHIP Association for Women in Mathematics, The Econometric Society
American Economics Association, Canadian Economics Association
The Society for Social Choice and Welfare, The Society for Medical Decision Making
American Society of Health Economists, International Health Economics Association

ABSTRACTS **“Hippocratic Paradox: A Mathematical Analysis of Medical Decision-Making”**
(with Saari)

The Hippocratic Oath and its derived four principles — nonmaleficence, beneficence, respect for patient’s autonomy, and justice — are the moral foundations of medical decision-making. However, they are found self-contradictory in both theory and practice, which leads to hard cases confronted by the U.S. Supreme Court. This paper aims to resolve such paradoxes. It offers a geometric approach to identify all possible contradictions in the form of cyclic rankings. This approach has achieved success in other areas in social sciences such as decision theory and voting theory (e.g., impossibility theorems by Arrow, Sen, and Saari) and can provide new interpretations in medicine and partial resolutions. This study is the first mathematical analysis of the Hippocratic Paradox. It identifies the cause and source of conflicts in medical decision-making, which are commonly concerned across disciplines including medicine, ethics/moral philosophy, law, and economics. By tracing where all such possible conflicts come from, we predict all paradoxical situations. And then by modifying the relative positions of problematic regions, that is, by remedying the extent of some principles, this study helps health professionals escape from fatal self-contradictions while making important decisions.

“The Possibility of Anonymous Social Orderings Using Curvature of Indifference Hypersurfaces” (with Haskell and Hurley)

This paper concerns the aggregation of individual preferences into a social ordering. Working in a higher-dimensional economic environment where an indifference hypersurface is

the level set of a utility function representing a preference relation, we give axiomatic conditions under which a function on the indifference hypersurfaces can be used to define a rational anonymous social ordering function. We show that the curvature of the indifference hypersurfaces can potentially be used as such a function, and discuss a possible economic interpretation of the curvature. The minmax-like definition of our social ordering function coincides with the Rawlsian difference principle under certain circumstances.

JEL classification: D63; D70; D71

Keywords: Preference aggregation; Social ordering function; Independence of irrelevant alternatives; Indifference hypersurface; Curvature; Information

“Investing in Health: A Macroeconomic Exploration of Short-Run and Long-Run Trade-Offs” (with Scarth and Hurley)

This paper aims to unravel the competing effects of the health investment. It explores, both analytically and numerically, the equilibrium shift and transitional dynamics after a one-time policy of health investment. We find that such a policy improves health status in the long run, but harms economic growth in both short and long term. The relative sizes of these competing effects depend on the specific health parameters. Within the plausible range for the value of health relative to consumption, households gain welfare in the long run as long as the effectiveness of labor in health production is large. The expanded health sector policy makes households worse off only if labor is rather unproductive in producing health and households value health relatively little. The findings challenge the policy recommendations of the World Bank (1993) and World Health Organization (2001) in that good health increases neither the productivity of workers nor the economic growth rate. It is hoped that the relative simplicity of our model, compared to the existing theoretical literature, can help close the gap between formal academic work on this topic and actual debates among policy makers in both developed and developing countries.

JEL classification: E2; E6; O4; I1

Keywords: Health capital; Health investment; Endogenous growth; Dynamic system; Transitional dynamics
